Address for correspondence: kaos@kazusa.or.jp For the latest information on annotation of this clone, please see http://www.kazusa.or.jp/kaos/cgi-bin/agd graph.cgi?c=MQM1 Genes with similarity to proteins in the databases are described in 'product' or 'note' qualifiers. Genes that have no significant protein similarity are described as 'unknown protein'. The software programs used to predict genes include: Grail (Informatics Group, Oak Ridge National Laboratory, http://compbio.ornl.gov/Grail-1.3/),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1656

Gaston Cremieux, 91057 Evry cedex, FRANCE
PCR was performed on DNA from transformants of Arabidopsis thaliana
plants from INRA (Versailles). The DNA fragment(s) resulting from
the PCR were directly sequenced from the left or the right border
to determine the genomic sequence flanking the insertion. T-DNA
derived sequences were removed. Information to order the
corresponding mutant line and a link to a database providing a
graphical display of the insertion site are available at
http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
been generated in the framework of the French plant genomics
program 'Genoplante' (http://www.genoplante.com and
http://genoplante-info.infobiogen.fr).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Submitted (11-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
Baylor Plaza, Houston, TX 77030, USA
On Oct 11, 2002 this sequence version replaced gi:21909375.
On Oct 11, 2002 this sequence version replaced gi:21909375.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.ttmc.edu/projects/rat/). Each contig described (http://www.hgsc.bcm.ttmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas in the feature table below represents a scaffold in the Atlas in the feature contig-scaffold). Within each contig-scaffold, assembly (a 'contig-scaffold'). Within each contig-caffold, and separated individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rat Genome Sequencing Consortium.

E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk On Nov 3, 2002 this sequence version replaced gi:24395353. Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to confirm this sequence. Sequence data from the whole genome shotgun alone has only been used where it has a phred quality of at least 30.

It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Center project name Center clone name:

NOTE: This is a 'working draft' sequence. It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Consensus quality: 208040 bases at least Q40 Consensus quality: 211445 bases at least Q30 Consensus quality: 213463 bases at least Q20 Insert size: 227000; agarose-fp Insert size: 242000; pulse-field-gel Insert size: 217274; sum-of-contigs Quality coverage: 4.40x in Q20 bases; agarose-foulity coverage: 4.40x in Q20 bases; pulse-fie Quality coverage: 4.91x in Q20 bases; sum-of-co

NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

* NOTE: This is a 'working draft' sequence. It currently
consists of 58 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     pieces.

ABL15067

New SGS3 gene from Arabidopsis thaliana, useful for increasing virus resistance in plants and, when inhibited, for increasing transgene expression.

The present sequence encodes the Arabidopsis thaliana SGS3 polypeptide The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of

                                                                                                                                                                       The present sequence represents the genomic sequence of the Arabidopsis thaliana SGS3 gene. The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous recombination) increases the level of the transgene product. This product may e.g. impart resistance (to herbicide, insects or pathogens), alter contents cessential fatty acids or proteins, or is pharmaceutically active, e.g. is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SGS3 gene; post-transcriptional inactivation; RNA degradation; viral resistance; resistance; fatty acid content; protein content;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15-MAY-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PCR primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pCR primers AAF25371-72 were used to amplify cDNA encoding an Arabidopsis thaliana SGS3 polypeptide. The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous (e.g. impart resistance (to herbicide, insects or pathogens), alter may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmacceutically active, e.g. an immunoglobulin or interferon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        13-JUL-2000; 2000WO-FR002052

 PCR primers AAF25371-72 were used to amplify cDNA encoding an Arabidopsi thaliana SGS3 polypeptide. The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous (e.g. branches) increases the level of the transgene product. This product may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interferon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (AVET )

The method uses fluorescence-labeled nucleic acids isolated from CC the FF cells and a substrate of expressed sequence tags (EST). The ESTs CC are used in the methods for monitoring differential expression of genes CC in a first filamentous fungal (FF) cell relative to expression of the CC same genes in one or more second filamentous fungal cells. Monitoring the CC global expression of genes from FF cells allows the production potential CC of the microorganisms to be improved. New genes may be discovered, CC possible functions of unknown open reading frames can be identified and CC genes can be used to study how FF cells addapt to changes in culture conditions, environmental stress, spore morphogenesis, recombination, CC metabolic or catabolic pathway engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of candidancy as one spot on an array equals one gene or open reading frame, CC and organisation of the microarrays based on function of the gene copy for facilitate analysis of the results. AAF11248 to AAF11247 represents ESTs from Fusarium venenatum; AAF11248 to AAF11853 represents CC Aspergillus oryzae; and AAF14879 to AAF15337 represents ESTs from CC Trichoderma reesei, which are all specifically claimed in the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method for detecting the presence of polymorphisms associated with inflammatory bowel diseases such as ulcerative colitis and Crohn's disease. The methods can be used to detect the presence of genetic polymorphisms associated with inflammatory bowel disease and correlating their occurrence with disease states. They may be used in this way for phenotypic correlations, forensics, paternity testing, medicine and genetic analysis. The present sequence is a gene containing a polymorphic site described in the exemplification of the
            The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. AAA81453 to AAA82414 represent specifically claimed Neisseria meningitidis genomic DNA sequences; AAA81260 to AAA81303 and AAB25620 to AAB25663 represent Neisseria DNA sequences and their corresponding proteins; AAA81254 to AAA81259 and

The nucleic acid CC sequences, protein sequences, and antibodies against them, can be used in CC the manufacture of a composition. The composition can be used as a CC the manufacture of a medicament) for treating, CC preventing or diagnosing infection due to Neisserial bacteria. For CC example, some of the identified proteins could be components of vaccines CC example, some of the identified proteins could be components of vaccines CC will also facilitate production of sequences from the bacterium CC pathogenic Neisseriae. Identification of sequences from the bacterium CC corganism-specific probes. Attempts to make efficacious Meningococcus B corganism-specific probes. Attempts to make efficacious Meningococcus B CC vaccines have also been tried but none have successfully overcome CC contigency variability. The provision of further, complete sequences may consider an opportunity to identify secreted or surface exposed proteins cantigenically variable or at least more conserved than other more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 8

```
The invention relates to genes and their expression profiles are used for: (a) screening modulators of precursor stem cell differentiation into consteoblasts, or bone tissue deposition; (b) diagnosing abnormal consteoblasts, or collection of bone tissue, abnormal rate of osteoblast formation or cited in (b), or monitoring the progression of bone tissue deposition. Conted in (c), or monitoring the progression of bone tissue deposition. Consteoblast or male osteoporosis, osteoporosis, glucocorticoid consteoporosis or male osteoporosis, osteoporia, osteopory, drugtinduced abnormalities in bone formation or bone loss, conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), involve altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), conditions that continue altered bone metabolism (e.g. idiopathic juvenile osteoporosis), c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes the full length genome of Neisseria CC meningitidis B (NMB). The sequences in AAF21544 and AAF21607 to AAF21613 CC represent fragments of the NMB genomic sequence, as the sequence was too CC long to go in a record on its own it was split into 8 sequences which CC overlap each other at the beginning and end of each sequence by 49980 bp CC (i.e. the last 49980 bp of AAF21544 is repeated at the beginning of CC AAF21607, the last 49980 bp of AAF21607 are repeated at the beginning of CC AAF21607, the last 49980 bp of AAF21589 encode the Neisseria proteins CC given in AAB58550 to AAB58533, and AAF21588 encode the Neisseria proteins CC primers which are used in the exemplification of the present invention. CC be used in vaccines and gene therapy. Neisseria nucleic acids, proteins CC and/or antibodies which binds to the proteins can be used in compositions CC for treating or preventing infection due to Neisserial bacteria or as a CC diagnostic reagent for detecting the presence of Neisserial bacteria or CC of antibodies raised to Neisserial bacteria. Computers, computer memory, CC computer storage medium or computer databases can be used in a search to CC identify open reading frames (ORFs) or coding sequences within the NMB CC genome. The DNA sequences provide further opportunities to find antigenic CC outer membrane proteins currently used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                            The present invention describes isolated polynucleotides and proteins CC encoding and representing the enzymes cinnamate 4-hydroxylase (C4H), conmarate 3-hydroxylase (C3H), phenolase (PNL), 0-methyl transferase CC (CMT), cinnamyl alcohol dehydrogenase (CAD), cinnamyl-coA reductase CC (CCR), phenylalanine ammonia-lyase (PAL), 4-coumarate:COA ligase (4CL), CC coniferol glucosyl transferase (CGT), coniferin beta-glucosidase (CBG), CC claccase, peroxidase, ferulate-5-hydroxylase (FSH), alpha-amylase, caffeic CC acid methyl transferase, caffeoyl COA methyl transferase, coumerate COA (CC acid methyl transferase, caffeoyl COA methyl transferase, coumerate COA (CC acid methyl transferase, caffeoyl COA methyl transferase, coumerate COA (CC acid methyl transferase, caffeoyl COA methyl transferase, which are CC used for modulating lignin content, lignin composition and the structure CC of a plant, especially eucalyptus and pine species, and for modifying the CC activity of an enzyme involved in lignin biosynthetic pathway, and for corducing a plant having altered lignin content, composition and CC structure. They can be used for designing probes and primers useful for CC detecting similar DNA and RNA sequences in any organism and for PCR conjuncteotides. AAA67908 to AAA68201 and AAB16341 to AAB16449 represent CC polynucleotide and protein sequences used in the exemplification of the Cr present invention.
                                                                                  Query Match

The polynucleotides, polypeptides and genetic constructs are useful for modulating lignin content, composition and structure of plants, or for producing a plant having altered lignin content, composition and structure. The polynucleotides are also useful in genome mapping, physical mapping, positional cloning of genes, or as non-disruptive tags for marking organisms, particularly plants. The present sequence represents a polynucleotide associated with the lignin biosynthetic pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotide associated with the lignin biosynthetic pathway, for modulating lignin content, composition and structure of plants, or producing a plant with altered lignin content, composition and structure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bloksberg LN, Havukkala

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAW82170 to AAW91921. (I) have cytostatic cc activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting the CC nucleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic CC to AAK87694 represent human immune/haematopoietic antigen genomic
                                                                                                                                                                                                                                                                                                                                                                                                                              17-NOV-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SXS
                                                                                    This sequence represents a fragment of the CCR enzyme coding sequence. It CC is an example of a DNA sequence of the invention, which are from CC Eucalyptus grandis (eucalyptus) and prinus radiata (pine) associated with the lighin biosynthesis pathway. Constructs containing the DNA sequences CC can be used to produce transgenic plants or plant cells, especially woody plants e.g. eucalyptus or pine species but also e.g. monocotyledons or CC dicotyledons; by stably incorporating the constructs into the plant CC genome. The lighin content or structure, or activity of a specific enzyme in the plant, can therefore be modulated. Reductions in lighin content or CC changes in composition are useful in tree processing for paper. High lighin content results in energy- and chemical-intensive separation methods in order to obtain the pure cellulose fibre required. Reductions in lighin content may also be useful for forage crops, whilst increases in lighin content may also be useful for increase the mechanical strength of wood, change its colour or increase the mechanical corporate are also useful as probes to isolate DNA sequences encoding enzymes involved in the lighnin biosynthesis pathway from other plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                            This sequence represents a cinnamoyl-CoA reductase (CCR) partial CDNA CC from Eucalyptus grandis. This enzyme is involved in the biosynthesis of CC lignin, an insoluble polymer which is primarily responsible for the CC rigidity of plant stems. Lignin serves as a matrix around the CC polysaccharide components of some plant cell walls. The higher the lignin CC content, the more rigid the plant. Lignin also plays a role in disease CC resistance of plants by impeding the penetration and propagation of CC pathogenic agents. Lignin is formed by polymerisation of at least three CC pathogenic agents. Lignin is formed by polymerisation of at least three CC pathogenic agents of three monolignols are synthesised by similar CC sinapyl alcohol. These three monolignols are synthesised by similar CC pathways from phenylalanine in a multistep process and are believed to be CC plants can be altered using DNA sequences encoding these enzymes. CC Lignin content can be increased by incorporation of additional copies of genes encoding these enzymes into the target plant. This could be beneficial for increasing the mechanical strength of wood. Similarly, a decrease in lignin content can be obtained by transforming the target plant with antisense copies of such genes. This may be beneficial in CCC plants used as forage crops for livestock (lignin is indigestible) and in trees used in paper manufacture

Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
